TECHNICAL SKILLS

Languages: C, C++, Java, HTML, CSS, JavaScript, Python, TypeScript, SQL, Bash

Technologies & Tools: Git, Linux, React, NodeJS, Bootstrap, Tailwind, GLSL, AWS Lambda, Cognito, Textract, RDS

TECHNICAL EXPERIENCE

Programming Extern | Project Manager/Frontend Dev, Coast Capital Savings Jan 2025 – May 2025

- Lead a team of 8 developers to build an OCR-based document processing system for mortgage applications, loans, and new account openings as part of CPSC 319.
- Designed and implemented a data extraction pipeline to streamline document handling, minimizing manual intervention, and reducing error rates.
- Used AWS Lambda to arrange serverless processing tasks such as file uploads, image conversions, document parsing, and PDF generation—triggered automatically via S3 events.
- Integrated AWS Textract to extract structured data from scanned images and PDFs; stored parsed data using Amazon RDS and Aurora.
- Implemented user authentication and Admin mode via Amazon Cognito to ensure secure access to document workflows.

PROJECTS

UBC Classroom and Course Finder Sept. 2024 – Nov. 2024
Full-stack Web Application *React, TypeScript, NodeJS, Maps API*

- Developed a web platform to provide students with searchable information on UBC courses and room assignments.
- Designed and implemented a RESTful API to process and serve detailed course and room data.
- Integrated Google Maps API for precise campus location mapping and room navigation.
- Applied thorough unit and integration testing using both black-box and white-box methodologies to ensure code reliability and performance.

Voice Buddy Nov. 2024
HackCamp 2024 - Best Hack for Social Good *React, JavaScript, NodeJS, Python, Whisper API*

- Created a Web application to help people with speech impairments, offering real-time practice to improve fluency by providing a visual guide for the user to follow.
- Integrated OpenAI's Whisper API to extract transcripts from YouTube videos.
- Leveraged API-generated timestamps to dynamically highlight words in sync with video playback, offering users a visual aid for speech practice.

Meet.Point Jan. 2025
NwHacks 2025 Winner - Stream.Place Prize *React, JavaScript, GeoJSON*

- Built a gamified event check-in platform promoting face-to-face interactions in third spaces.
- Integrated location-based validation using GeoJSON and TurfJS.

Full Stack Notes App June 2024
Apple Notes Clone *Swift, SwiftUI, MongoDB, NodeJS*

- Developed a clone of the Apple Notes app with CRUD functionality.
- Integrated MongoDB to securely store and retrieve data from a remote server.
- Leveraged Swift and SwiftUI to deliver an intuitive user interface.

Recipe Finder App February 2025 - April 2025
Full-stack recipe platform *JavaScript, Node.js, Oracle SQL, Express*

- Built a full-stack recipe discovery app with real-time CRUD operations for users, recipes, ingredients, and shopping lists.
- Designed a normalized Oracle SQL schema supporting joins, aggregations, and nested queries.
- Developed RESTful APIs using Node.js and Express for handling recipe, user, and category management.
- Created a dynamic front-end in vanilla JavaScript with admin controls, data visualization, and interactive forms.

EDUCATION

University of British Columbia Expected graduation: Jun. 2026

B.Sc. in Computer Science

Relevant Courses: Machine Architecture, Intermediate Algorithm Design, Introduction to AI, Introduction to Software Engineering, Relational Databases, Introduction to Networks.
